Add To CydiaQ: why is the field of concurrency very practical? i have taken concurrency for an undergraduate project which is about fetching a record from a database. there is a homework question asking the student to select the value 0 and 1 for a particular table. the question is whether to use the concurrent model or not. i believe that in the real world the concurrency is very common. however a practical example just that i have found so far for the concurrency is that when a doctor or some other professional has a patient. as this is a business based world, the time taken to process a single patient is important. how would the doctor get patients in a timely fashion? using a simple thread (single threaded) model will take time since it processes the patient one by one. if the doctor uses multiple threads(concurrent) for example 2, it will be able to process 2 patients at a time. i am considering that the concurrency is very practical. can anybody tell me why is the concurrency so practical? Thank you, Bhushan A: First of all, I understand that you are already aware of different mechanisms that provide concurrency and are asking if it is common in practice. Yes, it is! The main problem with your reasoning is that you are thinking that a doctor will normally have only one patient at a time (but the doctor might have more than one patient per
