The Note 5 marks a change from the current series' tradition of resting its chassis squarely on a Samsung-made display. The Note 5's new curved edges instead fit around a 5.7-inch, 1440x2160p AMOLED display, making it the largest, sharpest screen ever in a Note device. Samsung's continued investment in its display business is clear in the Note 5's screen. The 16-megapixel front-facing camera has a Sony-made 1.4-megapixel secondary lens, too, though it won't be available for all markets. The Galaxy Note 5 also features an upgraded processor and a new version of Samsung's own S Pen stylus. The Galaxy Note 5 has a few more stylus tricks, too: the pen's pressure and tilt sensors now can be used to preview emails in the inbox. The Note 5 will also be the first Android phone to include a version of Microsoft's Edge browser, and it will be the only mobile device to include Google's Duo video-calling app. Another addition that's coming to the Note 5 is an additional storage option. The Note 5 will have a larger option than the Note 4's 64GB option, but not as large as the Galaxy S6 Edge's 128GB option. A few other features of the Galaxy Note 5 have been unchanged since the last Note model: the fingerprint scanner, the microSD card slot, the micro-USB port, the 3.5-millimeter headphone jack and the IR blaster, which is included for controlling home theater equipment. Samsung hasn't shown the Note 5 yet, but it will be available in the U.S., China and India starting in the second quarter of the year. Samsung is expected to give the Note 5 a heavy marketing push after it's revealed at Mobile World Congress in March.Q:
