With the release of AutoCAD 2013, hand-drawn graphics can be created using shapes, not curves, and built into drawings. In addition, users can use the "write on drawing" feature, which allows users to draw on top of an existing drawing by "writing" using the cursor's position, scale, and orientation as a center point. Paths and draw objects With AutoCAD 2013, you can make a drawing follow a path. Each line segment of the path is "created" when a line segment is added. The path is then "deleted" when that line segment is added again, or if another segment is added that follows the same path, except the new segment is outside the path. All objects in the drawing (circles, squares, rectangles, polylines, splines, and text) can be placed at specific coordinates, making them "appear" at certain locations in the drawing. The user creates the line, polyline, or other object and the coordinates of the path that the object will follow. Note: If a closed path does not cross the boundary of the drawing area, the area will not be drawn. Layers AutoCAD supports multiple layers. A layer can be hidden (not displayed) or shown (displayed). Layers can be included or excluded when exporting a drawing as well as when ca3bfb1094
