He further testified that based upon his experience, his judgment, and what he had seen during the prior litigation, the fair market value of the property was \$725,000. This court's review of the trial court's award of damages is limited by Code of Civil Procedure section 904.1, subdivision (a)(2). That section provides that the standard of review of a damages award is whether any substantial evidence supports the award. (California Gasoline Retailers Assn. v. Department of Transportation, supra, 51 Cal.3d at p. 822.) (7) When the

Surface plasmon resonance study of the interaction between microinjected poly(vinyl alcohol)-based amphiphilic copolymers and a cell membrane. Amphiphilic block copolymers are cell-penetrating peptides that contain hydrophobic and hydrophilic portions. A poly(vinyl alcohol)-based amphiphilic copolymer (PVA-PCL-PEG) was synthesized and microinjected into HEK293 cells. The copolymer showed a high permeability into the cytosol and localizes to the mitochondria. However, the membrane-inserted copolymer does not function as a cell-penetrating peptide, as it cannot enter the cytosol. Analysis of the copolymer by surface plasmon resonance revealed that the insertion into the cell membrane was concentration dependent and this was further confirmed by a direct measurement of membrane fluidity. The insert microinjected into the cell membrane also co-localized with the mitochondrial membrane potential. This implies that a membrane-inserted copolymer and a cell-penetrating peptide simultaneously interact with the plasma membrane and the mitochondria.[Latency, frequency and clinical expression of multiple endocrine neoplasia type 1 syndrome]. Although hereditary endocrine tumors, MEN1 is responsible for 50% of cases of endocrine neoplasias, but the clinical phenotype of the disease is variable, ranging from a severe form with familial occurrence, familiar tumours, autosomal dominant inheritance with penetrance

estimated between 65-80% and a clinical expression more typical of sporadic endocrine neoplasias, with low penetrance and sporadic occurrence in most cases, usually even with no family history. To describe the variability in the clinical expression of endocrine tumours as a consequence of mutations in the MEN1 gene. A retrospective analysis of the clinical records of patients with MEN1 identified in a previous study carried out at the Hospital Central de México. A total of 90 patients were identified, representing 1.72% of the endocrine tumors diagnosed, with an average age of 57.
