the mcf8316a and mct8316a bldc motor drivers include: integrated bldc motor driver on a single chip variable-speed control, which provides motor-speed control over a wide range of loads and application conditions high-power capability, up to 70 w and 8 a of peak current no external hall sensors required no separate hall-sensor amplifier versatile motor-control algorithms and smart motor-control features the mcf8316a and mct8316a bldc motor drivers can be programmed in software using a microcontroller, eliminating the need for an external programming tool and time-consuming hardware programming. the devices can control 4- to 10-a motors, making them ideal for industry applications such as pumps and fans. the mcf8316a and mct8316a motor drivers include a microcontroller-based low-dropout regulator, a current-sense amplifier, and a dc/dc converter that enable designers to realize up to 50% savings in power supply costs and elimination of the need for a separate power-supply ic. the mcf8316a and mct8316a bldc motor drivers can be programmed in software to control a motor, which reduces overall system cost by eliminating the need for high-performance hardware and eliminating the need for external hall sensors. in addition, the devices feature high-speed commutation control algorithms that deliver consistent and predictable results. as a result, designers can reduce the potential for defects in motor control and drive system operation. programmers can also use these devices to control motors in ccm (current-commutation-mode) to reduce motor current and increase operating life.

the mcf8316a and mct8316a bldc motor drivers also provide a common platform for customers and partners to extend the design cycle, with a complete suite of development tools available at no cost. the tools include ti motor wizard, which offers a wide variety of motor-control capabilities to help engineers design a full

range of motors from 1 to 300 w. motor wizard provides the capability to specify the motor by its operational characteristics such as efficiency, torque, speed and current rating. the tool also offers a powerful motion controller interface that provides the tools for torque-in-travel and real-time encoder feedback, all in a compact, modular design that can be easily integrated into a project. the mcf8316a

and mct8316a bldc motor drivers are produced in ti and tsmcs world-class production facilities and meet ul, ul 2030 and ce standards. in addition, the devices are rohs compliant and can be used with a wide variety of high-performance silicon power mosfets from power mosfets with 1a and over to planar dmos (pdmos) and soi mosfets with gate-drain turn-on capability. these new motors are different

from the conventional brushed motors used in most consumer electronics devices, and that is the reason for their popularity. in the past, engineers had to be familiar with the mechanical structure of the motor and its electrical loads to build a bldc motor. now, with the new ic, they only need to be familiar with the ic and its electrical loads. this makes design and development easier for the engineer. with
