if you're an author who uses a desktop publishing app (like scribus) to make a print-ready copy of your work, storyist has a "print" button in the toolbar, and a file > export > print button in the file menu. it works, but it's tricky to set up and can be a bit of a pain to set up each time you make a print-ready version. it would be much nicer to just get storyist to make one automatically when you save a copy. if you're feeling particularly ambitious, you can also create pdf versions and email them to yourself,

which is a great way to prepare for when you send to a client. storyist is not an authoring tool, and it doesn't pretend to be. storyist is a writing app, and the part of it that lets you write and save notes does a good job. other parts of storyist, like the story sheets and the audio features, do not do nearly as well. i'd give it a 3 out of 5 stars. if you're looking for a tool that lets you keep your notes and projects in one place, then storyist is worth a try. if you're looking for a tool that helps you do things like edit, organize, and revise your writing, then storyist is not for you. storyist is a decent app, but it falls short on a few levels. first of all, it lacks any kind of project management, so you're stuck if you want to share your work with others. if you

want to look at the things you've already written, you'll have to open all of them. if you want to look at something in the future, you'll have to open it in a new project. there's no way to create a new project, assign a title, or add a few notes. there's no way to automatically save a file when you open it, and i wish there was.

Storyist 4.1.1
